

Level Intelligence OS

Official one-page dossier and term sheet

A private construction intelligence operating system for finding, qualifying, routing, and converting opportunities through Level's own operating judgment.

Pain Points

Signals are scattered across permits, planning, broker notes, franchise expansion, RFQs, and relationships. Judgment is trapped in people, inboxes, and project memory. Leadership needs exceptions, decisions, risks, and next actions in one place.

Outcomes, Not Just Code

We give you outcomes, not just code. Code is the mechanism. The product is operating lift: cleaner pipeline visibility, faster RFQ triage, fewer missed follow-ups, weekly executive decision rhythm, and reusable operating memory.

System Area	Client-Facing Outcome
Signal inbox	Early project, permit, planning, ownership, franchise, broker, and RFQ signals captured in one place.
Qualification engine	Pursue, watch, or pass recommendations based on Level-specific fit criteria.
RFQ command center	Scope summaries, deadlines, missing requirements, go/no-go memos, and bid tasks.
Executive brief	Weekly view of what changed, what is stuck, and what leadership must decide.

Term Area	Skeleton
Engagement	90-day pilot for Level Intelligence OS v1.
Deliverables	Data model, signal inbox, scoring framework, RFQ workflow, approval queue, weekly brief, success report, phase-two roadmap.
Ownership	Level owns data, operating memory, domain model, workflow definitions, and exportable generated records.
Commercial	Fixed-fee pilot, build plus retainer, strategy sprint, or long-term internal software partnership.
