

EXECUTIVE DECK

Level Intelligence OS

A private construction intelligence operating system for finding, qualifying, routing, and converting opportunities through Level's own operating judgment.

Operating view

- Early signals
- Level-specific qualification
- Executive decision rhythm

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

Level's advantage is real. It is just scattered.

The highest-value knowledge lives in RFQs, emails, calls, spreadsheets, permit threads, broker notes, project folders, and individual memory.

Operating view

- Active pursuits are hard to compare.
- RFQ risk is buried in documents.
- Relationship context depends on memory.
- Decisions are hard to learn from after the fact.

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

The cost is missed operating leverage.

Scattered judgment creates blind spots, duplicated work, slower decisions, weaker follow-up, and less learning from wins and losses.

Operating view

- Missed early opportunities
- Poor-fit pursuits consuming attention
- Leadership status chasing
- Past lessons not improving future scoring

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

Language-heavy work can finally become software.

Agents can read, structure, route, and remember RFQs, emails, permit comments, meeting notes, relationship context, project narratives, and executive judgment.

Operating view

- RFQs become deadlines and go/no-go memos.
- Relationship notes become account memory.
- Permit comments become blockers and follow-ups.
- Decisions become reusable learning signals.

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

This is not a vendor clone. It is built for Level.

Tools like Mercator show that earlier construction intelligence has value. But the goal is not to compete with Mercator or any other vendor. The goal is to build software from the ground up around Level's operating model.

Operating view

- **Generic tools expose signals.**
- **Level Intelligence OS encodes Level's**
relationships and standards.
- **It supports Level's RFQ, approval,**
capital, and executive workflows.
- **It becomes Level-owned operating memory.**

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

We bring proven platform primitives.

Level gets the benefit of prior construction-platform learning without exposing any prior client work or making this feel generic.

Operating view

- Connected construction data model
- Workflow state machines
- Specialist agent handoffs
- Approval gates and audit logs
- Dashboards and executive briefs
- Feedback loops from outcomes

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

Procore is the bridge, not the battlefield.

The first version should wrap around Procore as the current source of truth. Replacement only comes later, module by module, where the owned system proves stronger.

Operating view

- Read and reference Procore data
- Add intelligence above execution records
- Avoid disruption to active teams
- Measure friction and value
- Earn the right to replace

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

Software is becoming forward-deployed and company-specific.

The market is shifting from static SaaS toward AI systems built inside real operating constraints by experts who map workflows, ship, tune, and measure outcomes.

Operating view

- **OpenAI's Deployment Company is a market signal.**
- **Generic tools matter less than fit.**
- **Language-native systems can add and omit modules faster.**
- **Owned operating memory becomes a strategic asset.**

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

A private operating layer around Level's pursuit engine.

One place to see the signal, understand the fit, route the work, and track the decision.

Operating view

- **Find:** detect project, permit, planning, ownership, franchise, broker, and RFQ signals.
- **Qualify:** score opportunities against Level's criteria.
- **Route:** assign owners, next actions, and approvals.
- **Convert:** support RFQs, go/no-go memos, pursuit briefs, and weekly executive review.

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

We give you outcomes, not just code.

Code is the mechanism. Operating outcomes are the product.

Operating view

- Pipeline visibility
- RFQ discipline
- Decision speed
- Executive rhythm
- Enterprise memory

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

Earlier signals, structured before they become noise.

The signal inbox turns permits, planning agendas, title changes, franchise expansion, broker notes, inbound RFQs, CRM, and email activity into structured records.

Operating view

- Source
- Market
- Owner
- Confidence
- Score
- Next action

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

The score reflects Level's judgment.

Each opportunity is scored against the criteria Level actually uses to decide whether work is worth pursuing.

Operating view

- Market fit
- Asset type
- Relationship strength
- Owner quality
- Entitlement complexity
- Margin potential
- Capacity
- Strategic value

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

Relationship context becomes operating memory.

Accounts, contacts, internal relationship owners, prior projects, RFQs, touches, and next follow-ups become searchable and actionable.

Operating view

- Who do we know?
- Who owns the relationship?
- What have we built or bid?
- What should we say next?

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

Turn RFQs into decision-ready work.

RFQs arrive as language-heavy packages. Level Intelligence OS extracts the operating facts and prepares the go/no-go decision.

Operating view

- Scope summary
- Deadline extraction
- Missing information
- Schedule and site risk
- Comparable past work
- Go/no-go memo

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

The system prepares. Level decides.

Consequential actions remain under human control. The system drafts, recommends, routes, and logs.

Operating view

- **Autonomous:** summarize, classify, dedupe
- **Suggest:** owner, next action, pursue/watch/pass
- **Approval required:** outreach, bid submission, vendor award, budget change
- **Manual:** legal, financing, contracts, final strategic decisions

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

Leadership sees what changed, status, and needs judgment.

The weekly executive brief replaces status gathering with decision support.

Operating view

- Top new signals
- Highest-scoring pursuits
- RFQs due soon
- Stalled items
- Pending approvals
- Relationship follow-ups
- Decisions needed

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

ROI is operational first, strategic second, compounding third.

The bigger value is better pursuit discipline, faster decisions, fewer blind spots, and proprietary operating memory.

Operating view

- **Operational ROI: less admin and faster RFQ review**
- **Strategic ROI: better selectivity and relationship leverage**
- **Enterprise ROI: Level-owned operating memory**

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

A contained pilot with visible operating value.

The 90-day pilot proves usefulness in workflows Level already runs.

Operating view

- Weeks 1-2: foundation
- Weeks 3-5: intelligence
- Weeks 6-8: workflow
- Weeks 9-12: operating rhythm

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.

EXECUTIVE DECK

Build the system that makes Level sharper every week.

The first version creates visibility and decision speed. The long-term version becomes Level's proprietary construction intelligence layer.

Operating view

- **Level owns its data and generated**
operating memory.
- **AI providers remain replaceable**
infrastructure.
- **Export rights are preserved.**
- **Sensitive actions require approval.**
- **Approve a 90-day pilot.**

Find. Qualify. Route. Convert. Learn.

Outcomes, not just code.
