

Level Intelligence OS

A private construction intelligence operating system built around Level's relationships, RFQs, approvals, Procore reality, and operating judgment.

Scattered signals Permits, RFQs, planning activity, broker notes, franchise news, emails, and relationship tips arrive in different places.	Trapped judgment Fit, risk, margin, timing, relationships, and prior lessons live in people, inboxes, calls, and informal notes.	Status burden Leadership spends time reconstructing what changed, what is stuck, who owns it, and what needs approval.
---	--	--

We give you outcomes, not just code. Code is the mechanism. The product is cleaner pursuit visibility, faster RFQ triage, fewer missed follow-ups, a weekly executive decision rhythm, and Level-owned operating memory that compounds.	Built for Level, wrapped around Procore first. This is not a vendor clone or a rip-and-replace pitch. Procore remains the current execution source of truth while Level Intelligence OS becomes the intelligence, RFQ, relationship, approval, and executive layer above it.
---	--

What Level gets - Signal inbox for early project, permit, planning, ownership, broker, and RFQ movement. - Level-specific qualification score: pursue, watch, or pass with reasons. - RFQ command center with deadlines, missing items, risks, and go/no-go memo. - Executive brief showing what changed, what is stuck, and what needs judgment.	90-day pilot - Weeks 1-2: data model, roles, active pursuits, account/contact layer. - Weeks 3-5: signal inbox, opportunity summaries, scoring, relationship briefs. - Weeks 6-8: RFQ command center, deadline extraction, approval queue. - Weeks 9-12: weekly brief, outcome capture, adoption review, phase-two roadmap.	Term sheet skeleton - Engagement: 90-day private Level Intelligence OS pilot. - Ownership: Level owns data, operating memory, domain model, workflow definitions, and exportable records. - Commercial: fixed-fee pilot, build plus retainer, or long-term internal software partnership. - Control: external outreach, bid submission, vendor award, budget, investor, legal, and financing moves require human approval.
--	--	---

Opportunity capture Earlier signals become owned opportunities with source, score, owner, and next action.	Decision speed RFQ facts, blockers, and approval needs surface before they become bottlenecks.	Pursuit discipline Level spends less time on poor-fit work and more time on high-fit relationships.	Compounding memory Wins, losses, overrides, and outcomes improve the next recommendation.
--	--	---	---

Close: Level should not rent generic intelligence when it can build the operating memory that makes its own team sharper.
